1. The range for a set of data is estimated to be 36.
 - a. What is the planning value for the population standard deviation? (4%)
 - b. At 95% confidence, how large a sample would provide a margin of error of 3? (8%)
2. A researcher reports survey results by stating that the standard error of the mean is 20. The population standard deviation is 500.
 - a. How large was the sample used in this survey? (4%)
 - b. What is the probability that the point estimate was within ± 25 of the population mean? (8%)
3. The National Association of Home Builders provided data on the cost of the most popular home remodeling projects. Sample data on cost in thousands of dollars for two types of remodeling projects are as follows. Develop a 90% confidence interval for the difference between the two population means. (10%)

Kitchen	Master Bedroom	Kitchen	Master Bedroom
25.2	18	23	17.8
17.4	22.9	19.7	24.6
22.8	26.4	16.9	21
21.9	24.8	21.8	
19.7	26.9	23.6	

4. A Bureau of National Affairs survey found that 79% of employers provide their workers with a two-day paid Thanksgiving holiday with workers off both Thursday and Friday. Nineteen percent of employers provide a one-day paid holiday with workers off Thanksgiving Day. Two percent of employers do not provide a paid Thanksgiving holiday. Consider a sample of 120 employers.
 - a. What is the probability that at least 85 of the employers provide a two-day paid Thanksgiving holiday? (7%)
 - b. What is the probability that between 90 and 100 employers provide a two-day paid Thanksgiving holiday? (7%)

5. The Internal Revenue Service (IRS) provides a toll-free help line for taxpayers to call in and get answers to questions as they prepare their tax returns. In recent years, the IRS has been inundated with taxpayer calls and has redesigned its phone service as well as posted answers to frequently asked questions on its website. According to a report by a taxpayer advocate, callers using the new system can expect to wait on hold for an unreasonably long time of 12 minutes before being able to talk to an IRS employee. Suppose you select a sample of 50 callers after the new phone service has been implemented; the sample results show a mean waiting time of 10 minutes before an IRS employee comes on the line. Based upon data from past years, you decide it is reasonable to assume that the standard deviation of waiting time is 8 minutes. Using your sample results, can you conclude that the actual mean waiting time turned out to be significantly less than the 12-minute claim made by the taxpayer advocate? Use $\alpha = .05$. (10%)
6. The time between arrivals of cars at Al's full-service gas pump follows an exponential probability distribution with a mean time between arrivals of 15 minutes. Al would like to know the probability that the time between two successive arrivals will be more than 5 minutes. Calculate the probability for Poisson distribution and Exponential distribution, respectively. (12%)
7. A survey showed that 8% of Internet users age 18 and older report keeping a blog. Referring to the 18-29 age group as young adults, the survey showed that for bloggers 54% are young adults and for nonbloggers 24% are young adults.
- a. Develop a joint probability table for these data with two rows (bloggers vs. nonbloggers) and two columns (young adults vs. older adults). (8%)
 - b. What is the probability that an Internet user is a young adult? (4%)
 - c. What is the probability that an Internet user keeps a blog and is a young adult? (4%)
 - d. Suppose that in a follow-up phone survey we contact someone who is 24 years old. What is the probability that this person keeps a blog? (4%)

8. In an article about investment alternatives, Money magazine reported that drug stocks provide a potential for long-term growth, with over 50% of the adult population of the United States taking prescription drugs on a regular basis. For adults age 65 and older, 82% take prescription drugs regularly. For adults age 18 to 64, 49% take prescription drugs regularly. The 18-64 age group accounts for 83.5% of the adult population. Given an adult takes prescription drugs regularly, what is the probability that the adult is 65 or older? (10%)
