國立暨南國際大學九十五學年度碩士班研究生入學考試試題　　第2節

科目：統計學　適用：經濟所

編號：332

考生注意：
1.依次序作答，只要標明題號，不必抄題。
2.答案必須寫在答案卷上，否則不予計分。
3.限用藍、黑色筆作答；試題須隨卷繳回。

本試題
共 3 頁
第 1 頁

1. Let X have a distribution function F(x) defined by

$$F(x) = \begin{cases} 0, & x < 0, \\ x^2/4, & 0 \le x < 1, \\ 1/2, & 1 \le x < 2, \\ x/3, & 2 \le x < 3, \\ 1, & 3 \le x. \end{cases}$$

Please find the mean and variance for the random variable given by F(x) above. (10%)

2. Let $X_1, \cdots, X_n$ be a random sample from the exponential distribution with p. d. f.

$$f(x;\theta) = \frac{1}{\theta} e^{-\frac{x}{\theta}}, \ 0 < x < \infty, \ \theta \in \Omega = \{\theta; 0 < \theta < \infty\}.$$

Please prove that the maximum likelihood estimator for θ is $\hat{\theta} = \bar{X} = \frac{1}{n}\sum_{i=1}^{n} X_i$. (18%)

3. Suppose that the weight of cereal in a "10-ounce box" follows one normal distribution $N(\mu, \sigma^2)$. To test $H_0 : \mu = 10.1$ against $H_1 : \mu > 10.1$, we take a random sample of size $n = 16$ and observe that $\bar{X} = 10.4$ and $s = 0.4$.

(a) Do we accept or reject H_0 at the 5% significance level ? (5%)

(b) What is the approximate $p-value$ of this test? (6%)

4. Let X have the p.d.f.

$$f(x) = \begin{cases} xe^{-x}, & 0 \le x < \infty, \\ 0 & elsewhere. \end{cases}$$

(a) What is the moment-generating function $M(t)$?(5%)

(b) Please find the mean and variance with $M(t)$. (6%)

5. Consider the following regression model: $y_i = \beta x_i + u_i$, satisfying all linear regression assumptions except that $V(u_i) = \sigma^2 x_i^2$, for $i = 1, 2, \cdots, n$.

(a) Derive the weighted LS estimator $\tilde{\beta}$ for β. (10%)

(b) Let $\hat{\beta}$ denote the LS estimator for β. Explain why $\tilde{\beta}$ is more efficient than $\hat{\beta}$. (10 %)

6. Suppose that the data generating process is: $y_t = \beta x_t + u_t$, and $u_t = \rho u_{t-1} + e_t$, where x_t is non-stochastic, e_t is IID with mean zero and variance σ^2, $|\rho| < 1$, for all $t = 1, 2, \cdots, n$. Answer the following questions.

(a) What is the variance of u_t? (10%)

(b) Suppose that the regression model is $y_t = \beta x_t + v_t$. Derive the LS estimator $\hat{\beta}$ for β. (10%)

(c) According to (b), is $\hat{\beta}$ unbiased for β? (10%)
